seduces at first sight. Discover the beauty of Aryamond.

Discover a world beyond the diamond.

ARYAMOND

A WORLD BEYOND THE DIAMOND™

Aryamond seeks to reimagine the world of fine jewelry through its unique vision of bringing together ground-breaking technology and innovative design. It begins with the pioneering Aryamond lab-grown gem, which stands apart in the universe of precious and semi-precious stones. With a sparkle and fire superior to the diamond, our unique gemstone has been designed to appeal to jewelers and consumers in search of contemporary fine jewelry that moves beyond the tradition-bound offerings of legacy brands.

Born out of a technological breakthrough and a deep respect for Mother Nature, our one-of-a-kind stones have an ethical provenance that safeguards the environment. Developed in state-of-the-art labs, our striking Aryamond gem is composed of equal parts carbon, the matter which forms diamonds, and silicon, the substance utilized in semiconductor chips that power the world's digital economy. Our revolutionary gem ranks 9.25 - 9.5 on the Mohs scale, which classifies it as the second hardest gemstone in existence after the diamond, which rates 10 on the Mohs scale.

Our advanced gem-cutting & polishing process has been perfected by our in-house team of artisans who meticulously hand cut and polish each of our gemstones. Each Aryamond gem undergoes a proprietary patent protected treatment at our lab in California to enhance the stone's luster and brilliance that involves the formation of an outer layer featuring a special nanodiamond matrix. The result is a colorless (DEF) to near colorless (GHI) Aryamond gem with an unparalleled sparkle and fire designed to appeal to the modern consumer and jeweler in search of a rare, one-of-a-kind stone.

The Aryamond Gemstone Cuts

At Aryamond, we offer an impressive selection of gemstone cuts to allow clients the opportunity to create an extraordinary piece of fine jewelry they can truly their own. In addition, we offer a wide range of carat sizes to meet every desire and our experienced team of skilled craftsmen cut the gems by hand with precision to ensure each stone is a brilliant work of art.

Round

A veritable classic, the timeless shape of this perfect round brilliant cut maximizes the brilliance and beauty of the stone.

Emerald

Renowned for its understated elegance, this style focuses on a classic rectangular shape and features step-cut facets.

Cushion

This traditional cut incorporates a square center with rounded pillow-like corners to evoke a romantic mood.

Princess

Decidedly modern in appearance, this cut offers a four-sided pyramid shape and boasts Chevron-shaped bottom facets to enhance the sparkle of the gem.

Pear

A cross between a round and marquise cut, the tear-drop shape of the stone has a slimming effect when worn on the finger.

Heart

Ideal for a solitaire pendant or ring, this heart-shaped cut is the perfect declaration of love.

Oval

An elegant variant of the classic round cut, the elongated shape creates the illusion of size and emits a dazzling radiance.

Radiant

This elongated square cut, with a complete brilliant-cut facet pattern applied to the crown and pavilion, offers a lively brilliance comparable to round-cut stones.

Asscher

Known for its distinctive sparkle, this square-shape cut featuring large step facets and a high crown has an octagonal appearance as each corner is cropped.

Trillion

Characterized by a striking triangular-shape, this remarkable cut stands out for its stunning beauty.

Baguette

The rectangular form and minimalist construction of the baguette cut puts the focus squarely on the top section of the gemstone.

Marquise

This slender, eye-shaped cut with striking symmetry offers one of the largest crown surface areas to maximize the perceived size of the stone.

Thanks to our advanced, patented technologies and commitment to delivering unparalleled beauty, Aryamond is able to place into the hands of its clients an ethically sourced gemstone unlike any other. Our stunning lab-grown gem offers unparalleled consistency in shape together with a scintillating appearance and hardness that rivals the diamond. Discover the fascinating world of Aryamond, a world beyond the diamond.
